

OBOXO

Disinfection cabinet
Powered by ozone

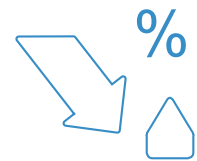

1 minute disinfection box
for people and materials

100% eco friendly

Ozone is produced
by electricity

Lowering infection rates
inside public buildings

OBOXO 100% ecological disinfection as there are no external or residual chemicals involved.

With OBOXO there is no danger of inhaling dangerous aerosoles or gases, your clothes stay dry with a superior level of disinfection in comparison to classical disinfection methods.

Oboxo disinfects people's clothes and hair before entering a building. It can be used as a disinfection method for materials as well. The disinfection process takes 60 seconds. Disinfection is performed via OZONE - a dry oxidizing gas which unselectively destroy a huge range of microbes. Ozone is produced by electricity. Residual ozone after disinfection is sucked out of the cabinet into the ambient air where it rapidly decomposes back to oxygen.
